

ML2021Spring HW5 Report

Mechanical Engineering 張舜淇

B06501059

Public Score	Private Score
31.41	29.44

The methods I used to pass the strong baselines include:

1. Apply back-translation and change hyperparameters based on “Attention is all you need”.
2. Use new dataset and increase the model size, and train a forward model.

(Your report should be written in English. Do not exceed 100 words describing your methods, but you may add comments to your code to make other students easier to understand.)
